

## Timber Cladding

Whether you are living in warm or cold Australian climates timber cladding offers you an economically beneficial comfort. Implementing timber cladding into your home design to ensure that you are provided with year round thermal protection ensuring that you are comfortable regardless of the seasons. Timber cladding is one of the most economical and flexible home building materials in use today and can be used to provide you with a building look which will meet your unique needs.

When considering your new home design you need to consider a product that will allow you to achieve your building dreams with minimal expense. Timber cladding is a product which will allow you to achieve this result and provide you the ability to portray your own style and personality in your new home. While there are many products which can be used to provide a housing finish timber cladding provides a professional finish with the added bonus of being flexible and resilient to the stresses of foundation and natural seismic movements.

Each year more and more Australians are realizing the benefits of using timber cladding to provide for their housing needs. However, even though timber cladding is in high demand the finish that a professional builder can provide for you will ensure that you retain the freedom to achieve a unique look. With a wide range of timber cladding products available there is a product which you can be sure will meet your design needs whether it be solid timber boarding or timber shingles.

Because your timber cladding will contribute to the overall aesthetics of your new home, you need to work in partnership with your builder so that the timber cladding product that you choose will achieve your desired outcome. Your builder will be able to discuss with you how timber cladding can assist in noise reduction, temperature control, and vapour control giving you the knowledge required to make an informed decision of which timber cladding will meet all of your needs.

Timber cladding has a long history of providing people with home designs that actually provide them with what they want. The biggest benefit of timber cladding is that because of its relative lightweight and ability to provide natural insulation it has the ability to dramatically reduce construction costs. When used in conjunction with a timber-shingled roof, timber cladding removes the need for bulky masonry foundation walls; this alone can reduce construction costs by up to 30%.

Timber cladding is again regaining popularity in the Australian building industry because of the advances in technology that allow timber cladding to meet the changing demands of the community. It is important to remember that should you decide upon timber cladding when building or renovating that you need to choose a reputable builder who is skilled in using timber cladding. With the many advances that have been made in the use of timber cladding you need to be satisfied that your builder has extensive and continued timber cladding experience to make sure that the end result exceeds all of your expectations.
